

NAVALINK C-06 Data Sheet

General description of NAVALINK C-06 pull through cable seals:

The **NAVALINK C-06** are High Security Cable Seals primarily for “door to door” application on containers and trucks. The locking mechanism of these seals is of unique and original design, rarely found on any other make of cable seals. It consists of three steel locking spring, three steel locking balls and assorted parts which are located inside of an all metal seal body covered in plastic. The mechanism engages the cable, gripping and securing it firmly. Most of the elements of the locking mechanism are made of steel and encapsulated in virgin ABS plastic, providing ultimate strength and hindering tampering before and after the seal’s application. Tampering with **NAVALINK C-06** High Security Cable Seals is virtually impossible for intruders and also deters “insider” collaboration in cargo theft and/or other wrongdoing.

Detailed description of NAVALINK C-06 cable seals:

The **NAVALINK C-06** are heavy duty High Security Cable Seals with a fixed length of cable and a Pull Through seal body which cannot be manipulated to be released and reused. It consists of a cable and separate seal body. The metal core of the seal body is encapsulated in virgin ABS plastic. Matching six digit consecutive seal numbers and logo are laser engraved on the surface of the locking bush and the cable end cap. The multi strand aircraft control steel cable is 6.0 mm (~ 0.236”). Tensile load is over 1,400 KG (~ 3,080 lb). Standard length overall is 1220 mm (~ 48”). This seal is intended for door to door application. Available in various colors. Bar coding is optional. Other lengths available. Embossed logo possible. Memory button option.

Accepted by US Customs as High Security Seal Complies with ISO/PAS 17712 “H” grade and C-TPAT

NAVATECH is a member of the **ICSC** (International Cargo Security Council) formerly the **NCSC** (National Cargo Security Council). We are the inventors of the **NAVALOCK**[®], the first solid steel interlocking bar seals for containers and trucks introduced in 1984 and the **NAVALINK** “door to door” (D2D) application mode of long cable seals introduced by us in April 2001 at the **NCSC** Annual Conference held at Chicago, IL. Our products are manufactured at an ISO 9001 accredited factory, using modern technology under strict quality control to assure High Security sealing and indisputable tamper evidence.

NAVALINK C-06 long type cable seals are packed 5 per nylon bag, 10 nylon bags per carton box (total 50 pc/box) 10.4 kg (~ 22.9 lb). The carton box sizes (LWH) are 410 x 270 x 150 mm (~ 16.25 x 10.5 x 6 inch).
