NAVALINK C-30P

Data Sheet

General description of NAVALINK C-30P pull through cable seals:

The **NAVALINK C-30P** are Security Cable Seals primarily for general sealing applications. The locking mechanism of these seals is of unique and original design. It consists of a steel locking spring and assorted parts which are located inside of an all metal seal body covered in plastic. The mechanism engages the cable, gripping and securing it firmly. Most of the elements of the locking mechanism are made of steel and encapsulated in virgin ABS plastic, providing ultimate strength and hindering tampering before and after the seal's application. The cable itself is Non Preformed Cable (NPC) which "blooms" when cut. Tampering with **NAVALINK C-30P** Security Cable Seals is virtually impossible for intruders and also deters "insider" collaboration in cargo theft and/or other wrongdoing.

Detailed description of NAVALINK C-30P cable seals:

The **NAVALINK C-30P** are Security Cable Seals with a fixed length of cable and a Pull Through System which cannot be manipulated to be released and reused. It consists of a cable and integral seal body. The metal core of the seal body is encapsulated in virgin ABS plastic. Six digit consecutive seal numbers and logo are laser engraved on the surface of the locking body. The multi strand NPC aircraft control steel cable is 3.0 mm (~ 0.118"). Tensile load is over 765 KG (~ 1,686 lb). Standard length overall is 150-200 mm (~ 6-8"). This seal is intended for general sealing applications. Available in various colors. Bar coding is optional. Other lengths available. Embossed logo possible.

Accepted by US Customs as High Security Seal Complies with ISO/PAS 17712 "S" grade

NAVATECH is a member of the **ICSC** (International Cargo Security Council) formerly the **NCSC** (National Cargo Security Council). We are the inventors of the **NAVALOCK**[®], the first solid steel interlocking bar seals for containers and trucks introduced in 1984 and the **NAVALINK** "door to door" (D2D) application mode of long cable seals introduced by us in April 2001 at the **NCSC** Annual Conference held at Chicago, IL. Our products are manufactured at an ISO 9001 accredited factory, using modern technology under strict quality control to assure High Security sealing and indisputable tamper evidence.

NAVALINK C-30P type cable seals are packed 10 per nylon bag, 20 nylon bags per carton box (total 200 pc/box) 10.4 kg (~ 22.9 lb). The carton box sizes (LWH) are 410 x 270 x 150 mm (~ 16.25 x 10.5 x 6 inch).

NAVATECH reserves the right to modify the design and/or materials, at any time, without prior notice, as deemed necessary.
